HASANI MADHUMALI

(BSc. Eng. (Hons) in Computer Engineering)

+94 77 859 2125 hasanimadhumali@gmail.com LinkedIn Profile Portfolio GitHub

Computer Engineering degree completed candidate with 10 months of industry experience in web and mobile application development. Skilled in building full stack applications using React, TypeScript, Node.js, and modern database technologies. Experienced in authentication systems, API integration, cloud storage solutions, and secure application development. Seeking an entry level Software Engineering opportunity to contribute to scalable and user focused systems.

PROFESSIONAL EXPERIENCE

Intern Software Engineer (HYPERBYTE (PRIVATE) LIMITED) **July 2024- April 2025**

- Developed and maintained web applications using React and TypeScript.
- Contributed to mobile application development using React Native.
- Integrated frontend applications with backend services.
- Implemented secure authentication flows using Firebase and Clerk.
- Managed cloud-based file storage using Cloudflare R2.
- Collaborated within an agile team to deliver new features and improvements.

EDUCATION

- **BSc. Eng. (Hons) in Computer Engineering - Degree Completed**
  Faculty of Engineering, University of Ruhuna.
- **G.C.E Advanced Level - Physical Science Stream**
  K/Girls' High School, Kandy

SKILLS

- **Programming:** JavaScript, TypeScript, Python
- **Frontend:** React.js, HTML, CSS, Tailwind CSS
- **Mobile:** React Native
- **Backend:** Node.js, REST APIs
- **Databases:** PostgreSQL, MySQL, MongoDB
- **Authentication & Security:** JWT, Firebase Auth, Clerk
- **Tools & DevOps:** Docker, Git, GitHub

RECENT PROJECTS

AI powered Fitness Tracking Application **Demo**

A fitness tracking application developed using React, enabling users to monitor their workouts, set fitness goals, and track their progress over time.

- React, Strapi, Tailwind CSS, Google Gemin AI

Food Ordering System **Demo**

A food delivery application enabling users to browse menus, place orders, complete payments, and track deliveries in real time.

- React, MongoDB, Stripe, REST API, JWT Authentication

AI-Aided Personalized Learning System - Group Project **GitHub**

Developing an AI based web application that adapts learning content and assessments based on individual student skill levels, with an initial focus on computer programming education.

- Python, Streamlit, PostgreSQL, Adaptive Learning, AI Models

Contribution: System design and logic implementation

Bookfair Reservation System -Group Project **GitHub**

Developed an online stall reservation system for a large-scale book exhibition, enabling vendors to register, reserve stalls via a venue map, and receive email confirmations with QR based entry passes.

- TypeScript, REST API, JWT Authentication, SQL database

Contribution: Frontend development and API integration

Secure File Transfer Protocol **GitHub**

Developed a secure file transfer system with integrity verification and replay attack protection to ensure secure and reliable data transmission.

- Java, Cryptographic Techniques, Secure Communication

EXTRA–CURRICULAR ACTIVITIES

- Student Demonstrator, Rextro Exhibition, University of Ruhuna
- Participated in HaXtream 2.0 Coding Competition, organized by IEEE Student Branch, University of Ruhuna
- Participated in Eminence 3.0 Technical Competition, organized by WIE, University of Ruhuna
